## 1. Introdução

### 1.1 - Apresentação do tema

Neste projeto desenvolvido na UC de Projeto I, temos como objetivo desenvolver diferentes modelos para melhorar a organização e a gestão dos meios disponíveis da empresa ReiPort.

ReiPort é uma empresa dedicada ao transporte de contentores em camiões (transportes pesados) na União Europeia.

Este projeto consiste na gestão dos pedidos de entrega (feitos pelos clientes) e dos meios para os referidos trabalhos (quer de logística, quer de mão de obra).

### 1.2 - Objetivos do projeto

Numa primeira fase do projeto, apresentamos os modelos BPMN e a descrição dos respetivos processos.

Numa segunda fase, apresentamos os diferentes tipos de utilizadores, bem como as suas ações no sistema, além de um levantamento de requisitos funcionais e não funcionais. Ainda se expôs os diferentes modelos e diagramas de design e modelação (Diagrama DER, Modelo de Domínio, Modelo de Classes e Modelo Relacional) e modelos e diagramas funcionais (Modelo de Casos de Uso, Templates de Caso de Uso, Diagrama de transição de estados, Diagramas de Sequência para 3 Templates de Caso de Uso e um Diagrama de Atividades).

Numa terceira fase, apresentamos o código utilizado no Postgres para criar as tabelas, os inserts, as views, os triggers, os indexes, os store procedures e por fim os updates e os deletes.

Numa quarta fase, já na UC de Projeto 2, a base de dados sofreu alterações e como tal alguns dos diagramas foram alterados, para ficarem a figura da nova base de dados.

## 2. Apresentação do negócio

Nesta secção apresentaremos os modelos de negócio (em BPMN) e os diferentes processos.

### 2.1 - Âmbito e enquadramento do negócio

Esta empresa apenas realiza viagens de entrega, por exemplo: transporta a mercadoria para portos, fábricas, depósitos, empresas, comboios, aeroportos, etc. O rececionista recebe um pedido de trabalho, anota os dados e envia para o gestor, que verifica e agenda a entrega, além disso gere também os camiões e contentores a serem utilizados (se os camiões e contentores são disponibilizados pelo cliente ou pela empresa ReiPort), e os motoristas (se forem viagens de mais de 9 horas são necessários 2 motoristas). Ao receber a carga e antes de iniciar o transporte da mesma é realizada a inspeção e documentação da carga pelo/s motorista/s do pesado em questão, e no destino é realizada a verificação novamente para saber se a carga foi entregue em condições. Para os vários trabalhos, ReiPort dispõe do número necessário de camiões, contentores e motoristas para a realização dos trabalhos.

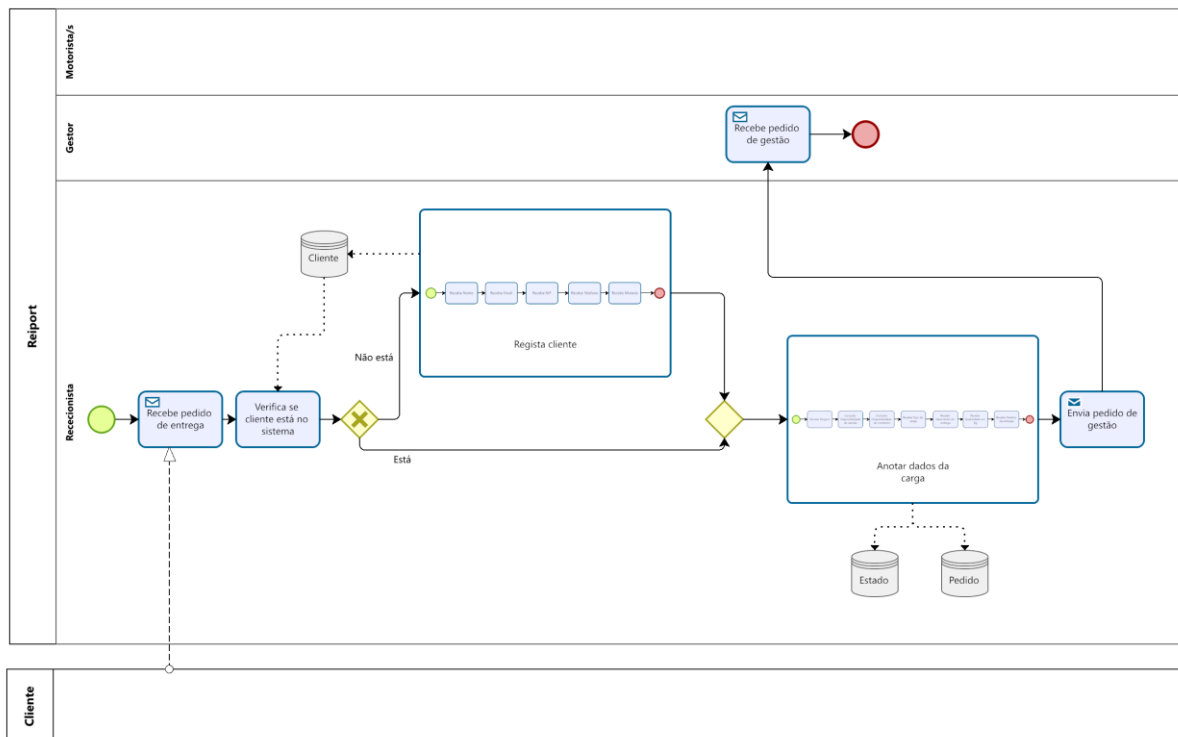

### 2.2 - Modelação dos Processos de negócio

Secção onde apresentaremos os modelos de negócio formulados.

### 2.2.1 Processo 1 – Processo de estabelecimento de mercadoria

Este processo consiste em receber um pedido de entrega, registá-lo e, posteriormente, enviá-lo para o gestor, para iniciar a fase seguinte.

Inicia-se com a receção de um novo pedido por parte de um cliente. O rececionista verifica se o cliente está na base de dados e, se não estiver, procede ao seu registo. No registo é pedido o nome, o email, o NIF, o telefone e, por fim, a morada. Depois regista a carga. Num diálogo com o cliente, configura os detalhes da entrega (origem da entrega, disponibilidade de camião, disponibilidade de contentor, dimensões, peso da carga, data-limite de entrega, tipo de carga, tamanho da carga, destino da entrega). De seguida, envia um pedido de gestão para o gestor e coloca o estado da entrega como suspensa.

### 2.2.2 Processo 2 – Processo de gestão e configuração da entrega

Este processo consiste em receber um pedido de gestão e proceder à organização e gestão dos meios disponíveis na empresa ou pelo cliente e a elaboração do CMR.

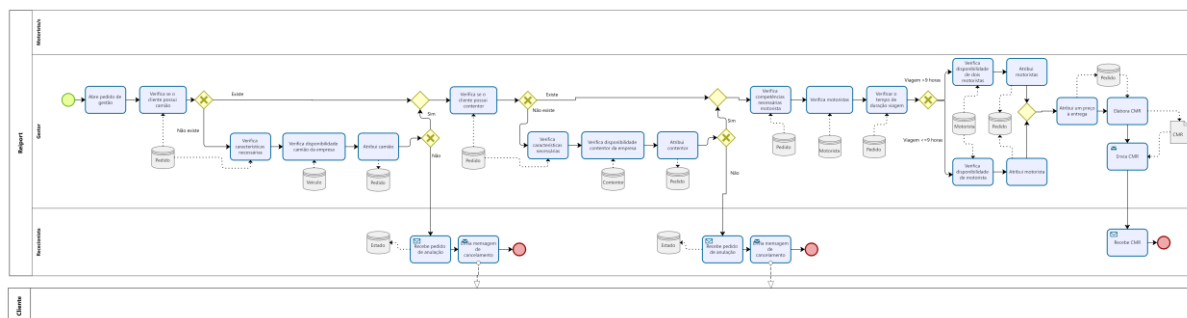

Inicia o seu trabalho verificando a disponibilidade de camião, isto é, confirma se o cliente fornece um camião para a entrega ou não. Se este não fornecer, é procurado um camião com as características pretendidas para o trabalho de acordo com o stock da empresa ReiPort. Se não for encontrado, o gestor envia um pedido de anulação ao rececionista que envia uma mensagem de cancelamento ao cliente e altera o estado da entrega para anulada.

Procede, então, à verificação da disponibilidade de contentor onde executa o mesmo procedimento realizado anteriormente.

Verifica os motoristas com competências para transportar o tipo de carga a entregar (por exemplo: para viagens de transporte de materiais inflamáveis, o motorista necessita do ADR, ...) e o tempo de duração da viagem. Em conformidade com a duração da viagem prevista, decide se o motorista necessita de um copiloto (viagens com mais de 9 horas).

Atribui, assim, um ou mais motoristas e um preço à entrega.

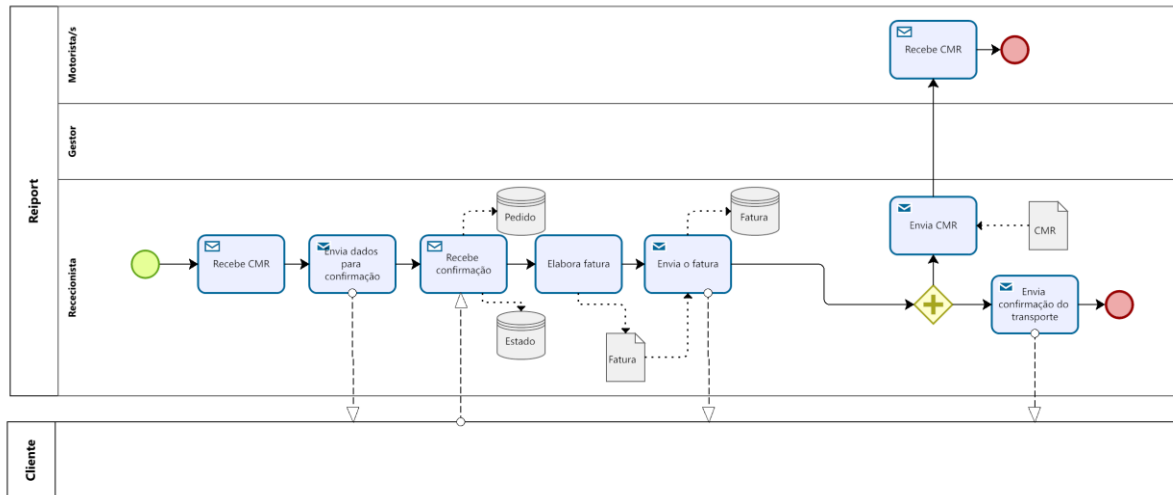

Elabora um CMR com toda a informação necessária para o/s motorista/s entregar/em a entrega. No fim envia o CMR ao rececionista.

### 2.2.3 Processo 3 – Processo de confirmação de dados e faturação

Este processo consiste na confirmação dos dados com o cliente, envio da data prevista da entrega e emissão da fatura.

Assim sendo, depois de enviar os dados recebe a confirmação do cliente e elabora a fatura que envia para o cliente, bem como altera o estado da entrega para agendada. Envia, também, o CMR para o/s motorista/s e a confirmação de transporte para o cliente.

#### 2.2.4 Processo 4 – Processo de finalização do pedido de entrega e inspeção

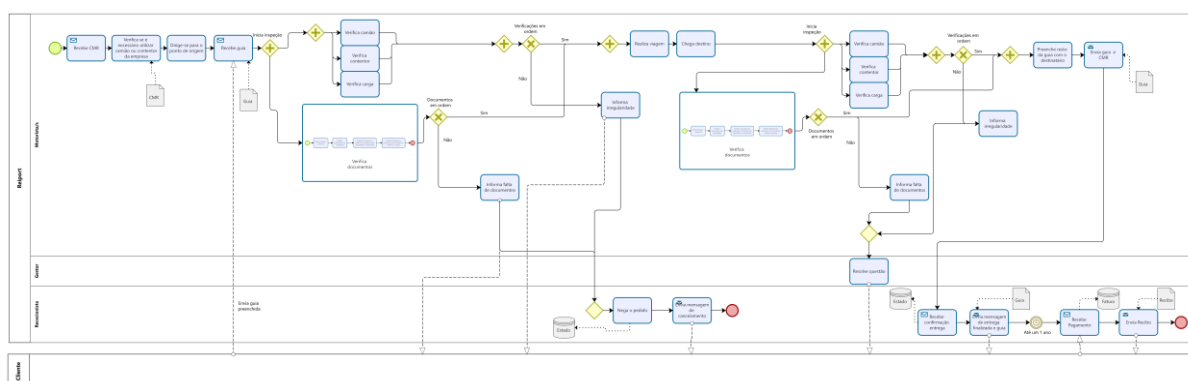

Este processo final consiste na viagem do motorista e das duas inspeções realizadas à carga, bem como a receção do pagamento.

O/s motorista/s recebe/m os detalhes enviados pelo rececionista (CMR) e procede/m ao levantamento do camião ou contentor, dependendo da verificação realizada pelo gestor quanto à utilização de camião ou contentor da empresa ou do cliente. Os motoristas dirigem-se para o ponto de origem da viagem de entrega. Na receção da mercadoria, recebem a guia devidamente preenchida pelo cliente. A carga é carregada e inicia-se o processo de inspeção da carga com a presença do cliente. Se o estado da carga e do camião e/ou contentor, bem como todos os documentos (necessários para o tipo de carga a transportar (fatura comercial, declaração de exportação, fotocópia do cartão de contribuinte do exportador e importador e por fim do parking-list (descrição da mercadoria, volumes e pesos))) estiverem em ordem, a entrega é realizada. Se por algum motivo, os documentos ou o estado de um dos três não estiver em ordem o cliente é informado, tal como o rececionista. Este nega o pedido e envia mensagem de cancelamento definitivo ao cliente.

O motorista realiza a entrega e, no destino, volta a verificar o estado da carga, do camião e/ou contentor, bem como todos os documentos. Se por algum motivo algo estiver incorreto, informa a/s irregularidade/s ao cliente e ao gestor, para que a situação seja resolvida.

Preenche o resto da guia com o destinatário e envia a guia para o rececionista.

O rececionista recebe a guia, altera o estado da entrega para concluída e envia para o cliente a guia. Por fim, o cliente paga o serviço e é enviado o recibo correspondente.

### 3. Levantamento de Requisitos

#### 3.1.1 - Apresentação dos tipos de utilizador

- Rececionista
- Gestor
- Motorista
- Cliente
- Admin

#### 3.1.2 - Ações de cada tipo de utilizador

O rececionista consegue registar novos clientes e fazer alterações, registar pedidos de entrega, visualizar os pedidos em procedimento, os pedidos agendados, envia ao cliente mensagens de cancelamento (se houver irregularidades no início da entrega) ou de conclusão do trabalho, atualiza o estado da entrega no sistema e recebe a confirmação destes detalhes, emite a fatura, envia a confirmação do início da entrega e o CMR ao motorista e recebe e envia a guia de transporte ao cliente. Consegue elaborar a fatura e recebe o pagamento do transporte, emite o recibo e envia-o para o cliente.

O gestor pode visualizar os pedidos em procedimento, os pedidos agendados, a logística da frota de camiões e contentores, os motoristas disponíveis, e definir o camião, contentor e motorista/s para o trabalho, além de atribuir um preço à entrega e emitir o CMR, que depois será utilizado pelo/s motorista/s. Além disso, tem de avaliar e corrigir qualquer irregularidade que surja durante a entrega. O gestor pode também registar o camião e/ou contentor para adicionar ao Stock.

O/s motorista/s recebem toda a informação necessária para o seu trabalho (na Guia de Transporte), além de realizar/em as inspeções à carga e aos meios utilizados no transporte. Também são responsáveis por receber e entregar as guias de transporte ao rececionista e, evidentemente, realizar a viagem.

O cliente pode verificar a qualquer altura o estado das suas encomendas, bem como alterar os seus dados, desde que efetue o seu registo no sistema.

O administrador pode gerir qualquer tipo de funcionário (rececionista, gestor e motorista).

### 3.2 - Requisitos Funcionais

Vocabulário	
CMR	É um documento de acompanhamento. É o documento preparado pela empresa para entregar ao motorista de um veículo.
Guia de transporte	Uma guia de transporte é um documento que declara que uma transportadora leva uma carga de A até B em nome do fornecedor. A guia de transporte declara as mercadorias contidas numa carga e o local onde serão entregues. A guia de transporte declara se devem ser cumpridas obrigações especiais para as mercadorias em questão (que tipo de habilitações são necessárias pelo motorista). O peso é também indicado e pode ser utilizado para verificar se o camião tem excesso de carga.

Requisitos Funcionais		
Referência	Descrição	Prioridade
RF01	Como rececionista, quero Registrar um cliente para geri-lo no sistema	Alta
RF02	Como rececionista, quero Registrar Pedido para os poder gerir	Alta
RF03	Como rececionista, quero poder Alterar os Dados dos Clientes e da sua carga para os atualizar	Média
RF04	Como rececionista, quero Visualizar todos os Pedidos (agendados, execução, suspensos, anulados e completos) para poder geri-los	Média
RF05	Como rececionista, quero poder enviar avisos de cancelamento, início do trabalho ou conclusão para o cliente	Baixa
RF06	Como rececionista, quero poder Alterar os Estados de Entrega para os atualizar	Alta
RF07	Como rececionista, quero enviar a confirmação do transporte para o cliente	Baixa
RF08	Como rececionista, quero poder Enviar Ficheiros para diferentes utilizadores do sistema	Alta
RF09	Como rececionista, quero poder aceder às guias de transporte para as enviar para os clientes	Alta

RF10	Como rececionista, quero Elaborar/Emitir Faturas para posteriormente enviar para os clientes	Média
RF11	Como rececionista, quero Elaborar/Emitir Recibo para posteriormente enviar para os clientes que já pagaram	Média
RF12	Como rececionista, quero Consultar os Ficheiros relativos à entrega para confirmar entregas com clientes	Alta
RF13	Como gestor, quero Visualizar todos os Pedidos (agendados, execução, suspensos, anulados e completos) para poder geri-los	Alta
RF14	Como gestor, quero Visualizar o Stock de Veículos e contentores da empresa ReiPort para poder geri-los	Alta
RF15	Como gestor, quero Consultar os Motoristas disponíveis para poder geri-los	Média
RF16	Como gestor, quero poder atribuir camião, contentor e motorista para a realização do trabalho	Alta
RF17	Como gestor, quero verificar se o cliente possui camião e/ou contentor para saber se é necessário atribuir camião da ReiPort	Média
RF18	Como gestor, quero verificar se a ReiPort possui camião para a entrega para anular o pedido se este não existir	Média
RF19	Como gestor, quero verificar se a empresa possui contentor para a entrega para anular o pedido se este não existir	Média
RF20	Como gestor, quero verificar motoristas com as habilitações necessárias para atribuir um trabalho onde estas são necessárias	Média
RF21	Como gestor, quero verificar se o tempo de duração da viagem é superior a nove horas para atribuir 2 motoristas	Baixa
RF22	Como gestor, quero calcular o preço de entrega de acordo com as condições definidas	Baixa
RF23	Como gestor, quero Elaborar CMRs para o enviar à rececionista e Visualizá-los	Alta
RF24	Como gestor, quero Resolver um aviso de Irregularidade para o poder, posteriormente, resolver	Alta
RF25	Como rececionista, quero poder aceder ao CMR para confirmar os dados com o cliente	Alta

RF26	Como motorista, quero poder aceder a todos os ficheiros relativos ao transporte (Guia de transporte, CMR) para conhecer todos os aspetos da entrega	Alta
RF27	Como motorista, quero Preencher um Formulário de Irregularidades na inspeção do camião, contentor e/ou da carga para colocar no sistema	Alta
RF28	Como motorista quero Enviar Ficheiros (ex: guia de transporte preenchida) para o sistema	Alta
RF29	Como cliente, quero me poder Registrar no sistema para previsão de serviço	Alta
RF30	Como cliente, quero Visualizar todos os meus Pedidos (agendados, execução, suspensos, anulados e completos) para ter conhecimento do progresso dos pedidos	Alta
RF31	Como cliente, quero poder Alterar os meus Dados para os atualizar	Alta
RF32	Como gestor, quero Registrar Camião e/ou Contentor para os adicionar ao Stock	Alta
RF33	Como Admin, quero Registrar, Alterar e Remover qualquer tipo de funcionário para fazer previsão do sistema	Alta

### 3.3 - Requisitos não funcionais

Requisitos Não Funcionais	
Referência	Descrição
RNF01	O sistema deve obrigar o gestor a colocar dois motoristas, quando são estimadas mais de nove horas de viagem
RNF02	O cliente tem até um ano para efetuar o pagamento
RNF03	Quando o motorista dá início ao transporte, pelo sistema, o estado da entrega atualiza, automaticamente, para Execução
RNF04	Um contentor apenas pode carregar um tipo de carga específico
RNF05	Um pedido apenas e só realiza uma entrega
RNF06	Quando o motorista preenche o formulário de irregularidades no transporte, pelo sistema, o estado da entrega atualiza, automaticamente, para Anulado

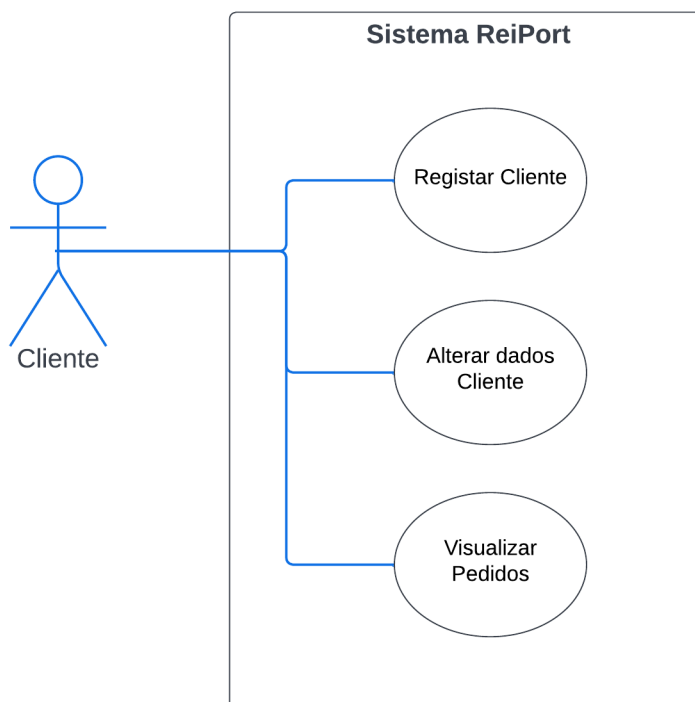

FIGURA 1 - CASO DE USO - CLIENTE

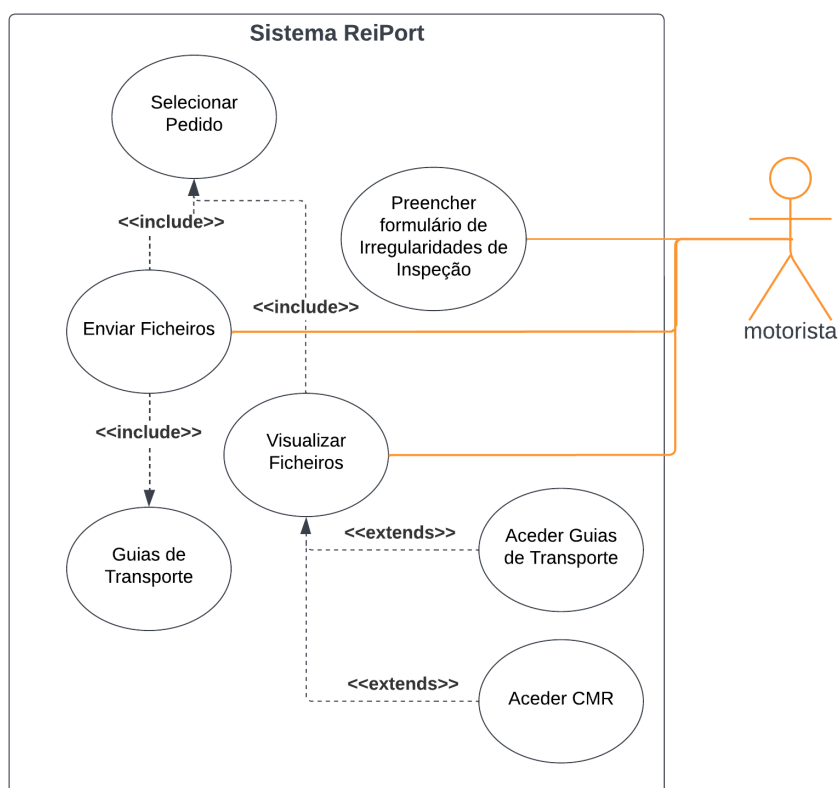

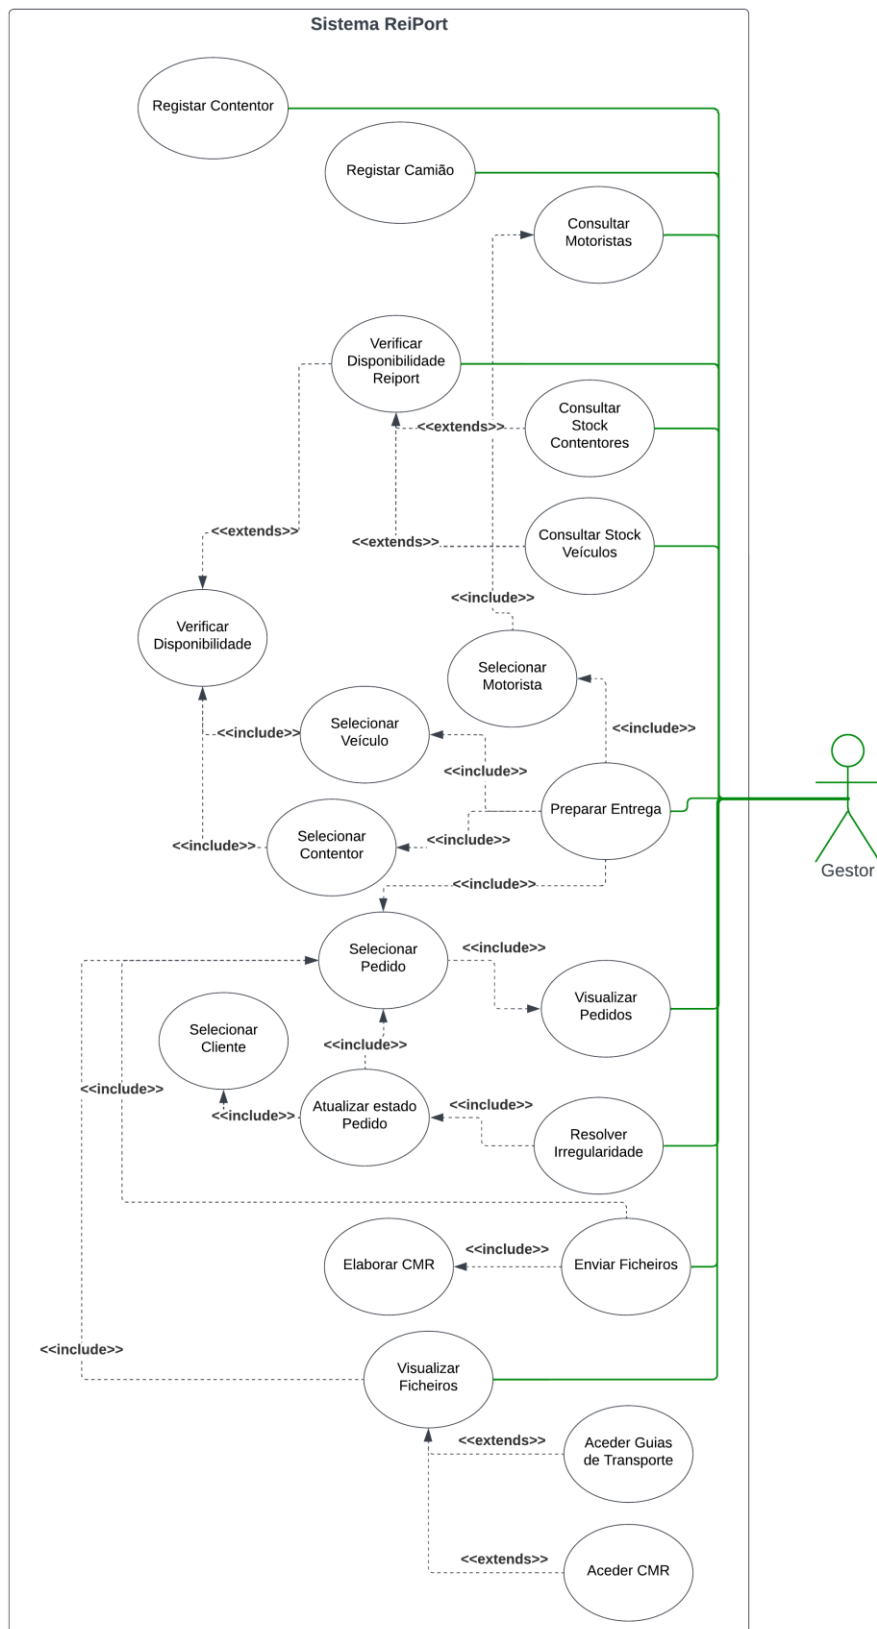

FIGURA 2 - CASOS DE USO - MOTORISTA

**FIGURA 3 - CASO DE USO - GESTOR**

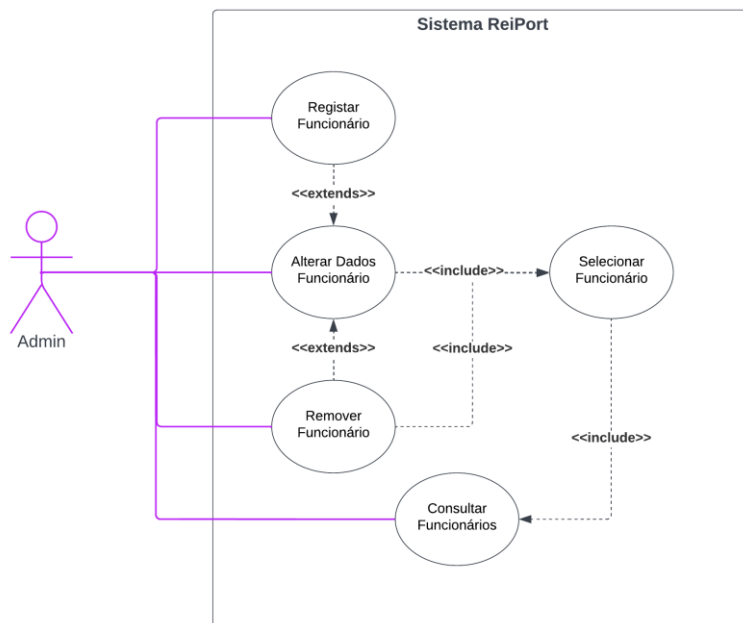

FIGURA 4 - CASO DE USO - ADMIN

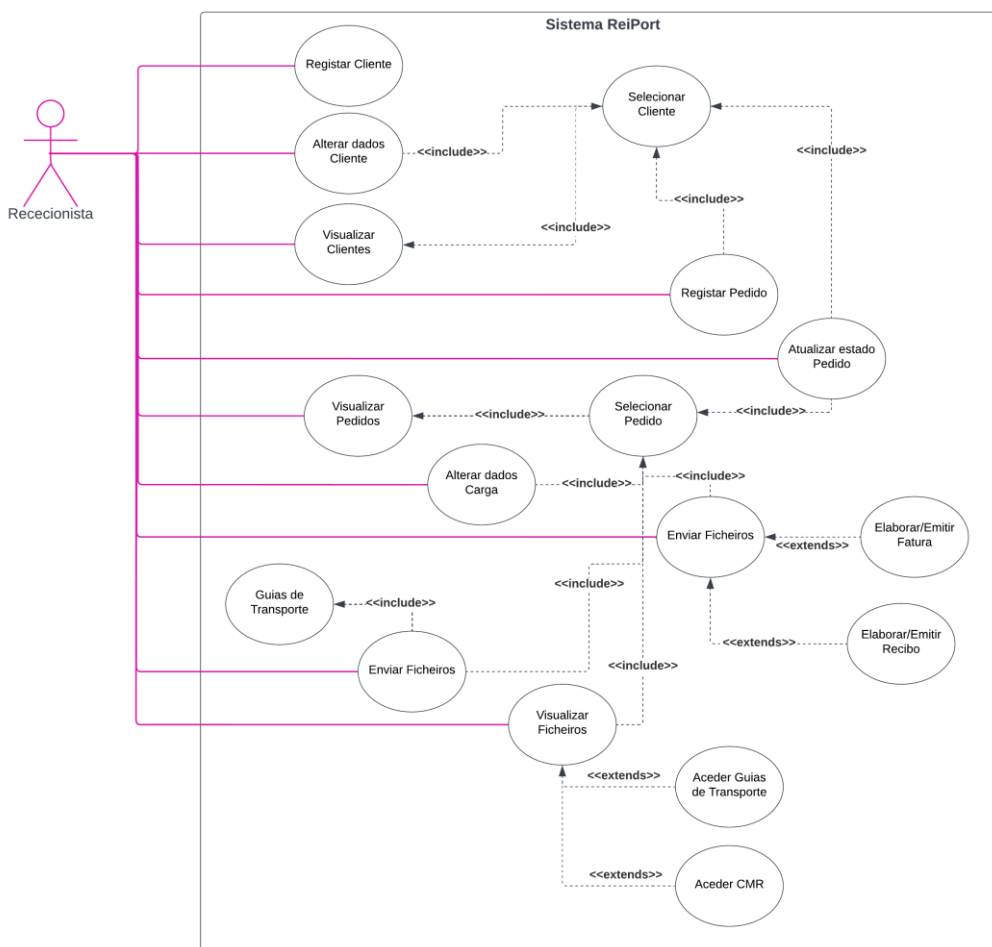

FIGURA 5 - CASO DE USO - RECECIONISTA

## Templates dos Casos de Uso

### Templates do Admin

Uso Caso 1:	Registar Funcionário
Ator Principal:	Admin
Requisitos	RF33
Pré-Requisitos:	Admin tem de estar registado no sistema
Pós-Requisitos:	É criado um funcionário no sistema
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Admin insere nome, data de nascimento, NIF, morada e telefone</li> <li>2. Sistema apresenta dados e pede confirmação para criar Utilizador</li> <li>3. Admin confirma</li> <li>4. Sistema gera email e password</li> <li>5. Sistema cria Utilizador</li> </ol>
Cenários Alternativos:	<ol style="list-style-type: none"> <li>1. Funcionário é Motorista <ol style="list-style-type: none"> <li>a) Admin insere nome, data de nascimento, NIF, morada e telefone, número de cartão de cidadão, ADR e CAM</li> </ol> </li> <li>1. Funcionário é Motorista e não tem CAM <ol style="list-style-type: none"> <li>a) Admin define campo CAM como Falso</li> </ol> </li> <li>1. Funcionário é Motorista e não tem ADR <ol style="list-style-type: none"> <li>a) Admin define campo ADR como Falso</li> </ol> </li> </ol>
Exceções:	<ol style="list-style-type: none"> <li>1. NIF inválido</li> </ol>

Uso Caso 2:	Alterar Dados Funcionário
Ator Principal:	Admin
Requisitos	RF33
Pré-Requisitos:	Admin tem de estar registado no sistema
Pós-Requisitos:	Os dados do funcionário são alterados no sistema
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Admin pesquisa Funcionários</li> <li>2. Sistema lista Funcionários por filtros definidos</li> <li>3. Admin seleciona Funcionário</li> <li>4. Admin altera os campos pretendidos</li> <li>5. Sistema apresenta dados e pede confirmação para Alterar Dados de Funcionário</li> <li>6. Admin confirma</li> </ol>
Cenários Alternativos:	
Exceções:	<ol style="list-style-type: none"> <li>3. Funcionário não existe</li> <li>4. Dados por preencher</li> <li>4. Dados inadmissíveis em campos</li> </ol>

Uso Caso 3:	Remover Funcionário
Ator Principal:	Admin
Requisitos	RF33
Pré-Requisitos:	Admin tem de estar registado no sistema
Pós-Requisitos:	Os dados do funcionário são removidos do sistema
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Admin pesquisa funcionários</li> <li>2. Sistema lista funcionários de acordo com filtros definidos</li> <li>3. Admin seleciona Funcionário</li> <li>4. Admin remove Funcionário</li> <li>5. Sistema apresenta funcionário e pede confirmação para Remover</li> <li>6. Admin confirma ação</li> <li>7. Sistema remove Funcionário</li> </ol>
Cenários Alternativos:	
Exceções:	<ol style="list-style-type: none"> <li>1. Funcionário não existe</li> </ol>

Uso Caso 4:	Consultar Funcionários
Ator Principal:	Admin
Requisitos	RF33
Pré-Requisitos:	Admin tem de estar autenticado
Pós-Requisitos:	Os funcionários são apresentados pelo sistema
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Admin pesquisa funcionários</li> <li>2. Sistema apresenta funcionários por filtros definidos</li> </ol>
Cenários Alternativos:	
Exceções:	

### Templates do Motorista

Uso Caso 5:	Preencher Formulário de Irregularidades de Inspeção
Ator Principal:	Motorista
Requisitos	RF27
Pré-Requisitos:	Motorista tem de estar autenticado
Pós-Requisitos:	É submetido um formulário de irregularidades preenchido no sistema
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Motorista cria formulário de irregularidades</li> <li>2. Motorista preenche formulário</li> <li>3. Motorista submete</li> <li>4. Sistema pede confirmação de submissão</li> <li>5. Motorista confirma</li> <li>6. Sistema armazena ficheiro</li> </ol>
Cenários Alternativos:	
Exceções:	<ol style="list-style-type: none"> <li>6. Ficheiro não enviado</li> </ol>

### Templates do Motorista, Gestor e Rececionista

Uso Caso 6:	Visualizar Ficheiros
Ator Principal:	Motorista, Gestor, Rececionista
Requisitos	RF09, RF12, RF23, RF25, RF26
Pré-Requisitos:	Utilizador tem de estar autenticado no sistema
Pós-Requisitos:	
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Utilizador pesquisa Pedidos</li> <li>2. Sistema lista Pedidos por filtros definidos</li> <li>3. Utilizador seleciona Pedido</li> <li>4. Utilizador acede aos ficheiros relativos ao Pedido</li> <li>5. Sistema apresenta ficheiros disponíveis</li> <li>6. Utilizador seleciona ficheiro pretendido</li> <li>7. Sistema apresenta ficheiro</li> </ol>
Cenários Alternativos:	
Exceções:	<ol style="list-style-type: none"> <li>1. Pedido não existe</li> <li>6. Ficheiro não existe</li> </ol>

### Templates do Motorista e Rececionista

Uso Caso 7:	Enviar Ficheiros
Ator Principal:	Motorista, Rececionista
Requisitos	RF08, RF28
Pré-Requisitos:	Utilizador tem de estar autenticado
Pós-Requisitos:	Submete um ficheiro no sistema
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Utilizador pesquisa Pedidos</li> <li>2. Sistema lista Pedidos por filtros definidos</li> <li>3. Utilizador seleciona Pedido</li> <li>4. Utilizador adiciona ficheiro ao Pedido</li> <li>5. Sistema adiciona ficheiro</li> <li>6. Sistema altera estado do pedido</li> </ol>
Cenários Alternativos:	
Exceções:	<ol style="list-style-type: none"> <li>3. Pedido não existe</li> <li>5. Ficheiro não compatível</li> <li>5. Ficheiro não enviado</li> </ol>

### Templates da Rececionista

Uso Caso 8:	Alterar Dados Cliente
Ator Principal:	Rececionista
Requisitos	RF03
Pré-Requisitos:	Rececionista tem de estar autenticado
Pós-Requisitos:	Os dados são alterados na conta do Cliente selecionada
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Rececionista pesquisa Clientes</li> <li>2. Sistema lista Clientes por filtros definidos</li> <li>3. Rececionista seleciona Cliente</li> <li>4. Rececionista seleciona o parâmetro que pretende alterar e altera um a um</li> <li>5. Sistema apresenta dados e pede confirmação para alterar dados do Cliente</li> <li>6. Rececionista confirma</li> </ol>
Cenários Alternativos:	
Exceções:	3. Cliente não existe

Uso Caso 9:	Visualizar Clientes
Ator Principal:	Rececionista
Requisitos	
Pré-Requisitos:	Rececionista tem de estar autenticado
Pós-Requisitos:	
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Rececionista pesquisa Clientes</li> <li>2. Sistema apresenta Clientes por filtros definidos</li> </ol>
Cenários Alternativos:	
Exceções:	

Uso Caso 10:	Registar Pedido
Ator Principal:	Rececionista
Requisitos	RF02
Pré-Requisitos:	Rececionista tem de estar autenticado
Pós-Requisitos:	Um Pedido é criado para um Cliente
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Rececionista pesquisa Clientes</li> <li>2. Sistema lista Clientes por filtros definidos</li> <li>3. Rececionista seleciona Cliente</li> <li>4. Rececionista regista novo Pedido</li> <li>5. Rececionista insere disponibilidade pelo Cliente de contentor e de veículo, peso da carga, data-limite, morada de origem de entrega e morada do destinatário no novo Pedido</li> <li>6. Sistema apresenta dados e pede confirmação</li> <li>7. Rececionista confirma</li> </ol>
Cenários Alternativos:	
Exceções:	3. Cliente não existe

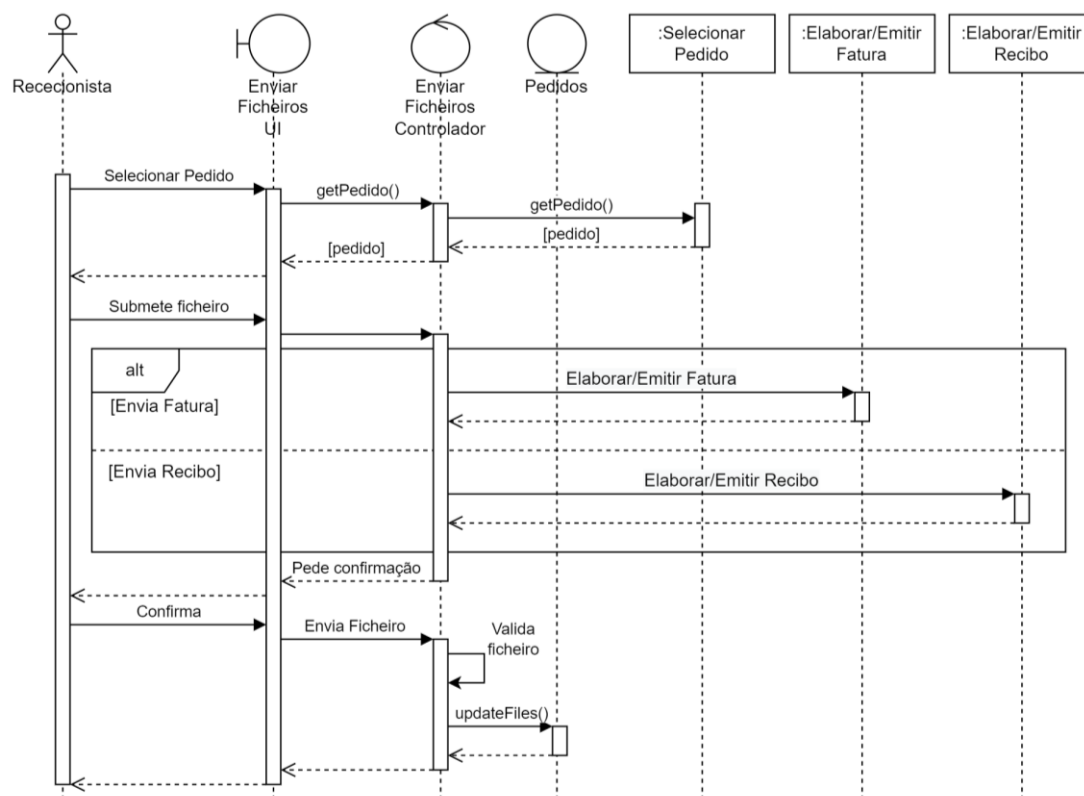

Uso Caso 11:	Visualizar Pedidos
Ator Principal:	Rececionista
Requisitos	RF04
Pré-Requisitos:	Rececionista tem de estar autenticado
Pós-Requisitos:	
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Rececionista pesquisa Pedidos</li> <li>2. Sistema apresenta Pedidos por filtros definidos</li> </ol>
Cenários Alternativos:	
Exceções:	

Uso Caso 12:	Alterar Dados Pedido
Ator Principal:	Rececionista
Requisitos	RF03
Pré-Requisitos:	Rececionista tem de estar autenticado
Pós-Requisitos:	Os dados do pedido selecionado do Cliente são alterados
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Rececionista pesquisa Clientes</li> <li>2. Sistema lista Clientes por filtros definidos</li> <li>3. Rececionista seleciona Cliente</li> <li>4. Rececionista pesquisa pedidos do Cliente</li> <li>5. Sistema apresenta pedidos do Cliente</li> <li>6. Rececionista seleciona pedido para efetuar alterações</li> <li>7. Rececionista seleciona o parâmetro que pretende alterar e altera um a um</li> <li>8. Sistema apresenta dados e pede confirmação</li> <li>9. Rececionista confirma</li> </ol>
Cenários Alternativos:	
Exceções:	<ol style="list-style-type: none"> <li>3. Cliente não existe</li> <li>6. Pedido não existe</li> </ol>

Uso Caso 13:	Atualizar Estado do Pedido
Ator Principal:	Rececionista
Requisitos	RF06
Pré-Requisitos:	Rececionista tem de estar autenticado
Pós-Requisitos:	É alterado o estado de um Pedido associado a um Cliente
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Rececionista pesquisa Clientes</li> <li>2. Sistema lista Cliente por filtros definidos</li> <li>3. Rececionista seleciona Cliente</li> <li>4. Rececionista pesquisa pedidos do Cliente</li> <li>5. Sistema apresenta pedidos do Cliente</li> <li>6. Rececionista seleciona pedido para efetuar alterações</li> <li>7. Rececionista atualiza estado</li> <li>8. Sistema apresenta dados e pede confirmação</li> <li>9. Rececionista confirma</li> </ol>
Cenários Alternativos:	
Exceções:	<ol style="list-style-type: none"> <li>3. Cliente não existe</li> <li>6. Pedido não existe</li> </ol>

Uso Caso 14:	Enviar Ficheiros
Ator Principal:	Rececionista
Requisitos	RF08, RF10, RF11
Pré-Requisitos:	Rececionista tem de estar autenticado
Pós-Requisitos:	Submete um ficheiro no sistema
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Rececionista pesquisa Pedidos</li> <li>2. Sistema lista Pedidos por filtros definidos</li> <li>3. Rececionista seleciona Pedido</li> <li>4. Rececionista elabora Fatura/Recibo</li> <li>5. Rececionista submete ficheiro</li> <li>6. Sistema pede confirmação</li> <li>7. Rececionista confirma</li> <li>8. Sistema envia ficheiro</li> </ol>
Cenários Alternativos:	
Exceções:	<ol style="list-style-type: none"> <li>3. Pedido não existe</li> <li>5. Ficheiro não compatível</li> <li>8. Ficheiro não enviado</li> </ol>

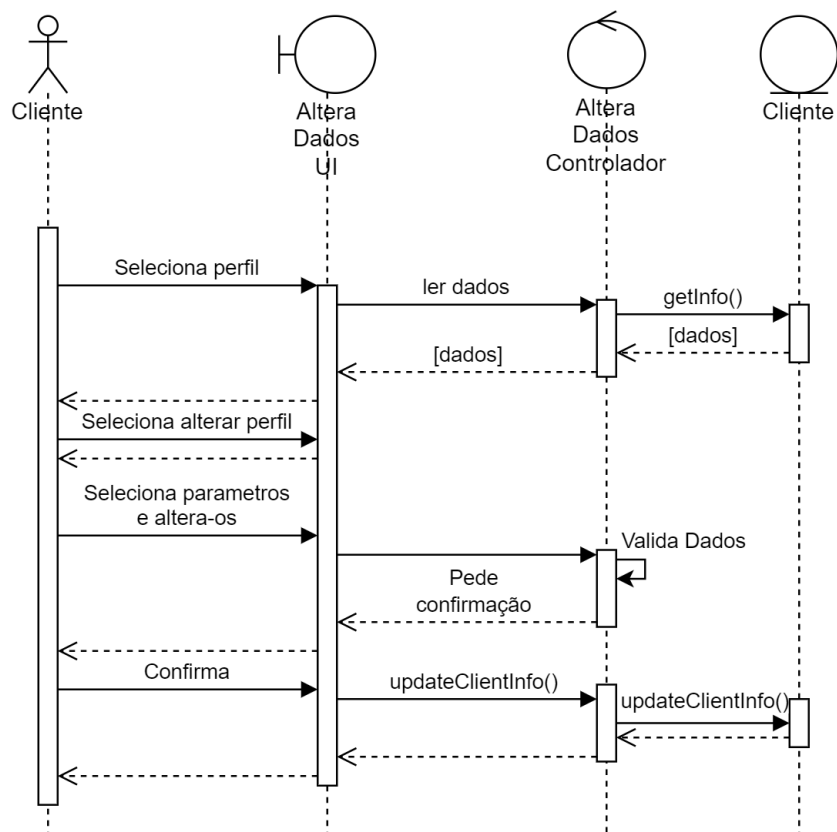

### Templates da Rececionista e Cliente

Uso Caso 15:	Registar Cliente
Ator Principal:	Rececionista, Cliente
Requisitos	RF01, RF29
Pré-Requisitos:	Utilizador tem de estar autenticado
Pós-Requisitos:	Uma conta de Cliente é criada no sistema
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Utilizador insere nome próprio, apelido, data de nascimento, NIF, morada, email, password e telefone</li> <li>2. Sistema apresenta dados e pede confirmação para criar Cliente</li> <li>3. Utilizador confirma</li> <li>4. Sistema regista Cliente</li> </ol>
Cenários Alternativos:	
Exceções:	<ol style="list-style-type: none"> <li>1. NIF inválido</li> </ol>

### Templates do Cliente

Uso Caso 16:	Visualizar Pedidos
Ator Principal:	Cliente
Requisitos	RF30
Pré-Requisitos:	Cliente tem de estar autenticado
Pós-Requisitos:	
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Cliente pesquisa Pedidos</li> <li>2. Sistema apresenta Pedidos</li> </ol>
Cenários Alternativos:	
Exceções:	

Uso Caso 17:	Alterar Dados Cliente
Ator Principal:	Cliente
Requisitos	RF31
Pré-Requisitos:	Cliente tem de estar autenticado
Pós-Requisitos:	Os dados são alterados na conta do Cliente
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Cliente seleciona e editar perfil</li> <li>2. Cliente seleciona o parâmetro que pretende alterar e altera um a um</li> <li>3. Sistema apresenta dados e pede confirmação para alterar dados do Cliente</li> <li>4. Cliente confirma</li> <li>5. Sistema atualiza os dados do Cliente</li> </ol>
Cenários Alternativos:	
Exceções:	<ol style="list-style-type: none"> <li>1. NIF inválido</li> </ol>

## Templates do Gestor

Uso Caso 18:	Registar Contentor
Ator Principal:	Gestor
Requisitos	RF32
Pré-Requisitos:	Gestor tem de estar autenticado
Pós-Requisitos:	Um contentor é registado no sistema
Cenário Principal:	<ol style="list-style-type: none"> <li>1. Gestor insere largura, comprimento, profundidade, cor, peso máximo suportado, marca, modelo e matrícula</li> <li>2. Sistema apresenta dados e pede confirmação para criar Contentor</li> <li>3. Gestor confirma</li> <li>4. Sistema regista contentor</li> </ol>
Cenários Alternativos:	
Exceções:	<ol style="list-style-type: none"> <li>1. Matrícula inválida</li> </ol>

## 4.2 - Modelação de dados

FIGURA 7 - DIAGRAMA DE ENTIDADES E RELACIONAMENTOS (DER) (1ª ABORDAGEM)

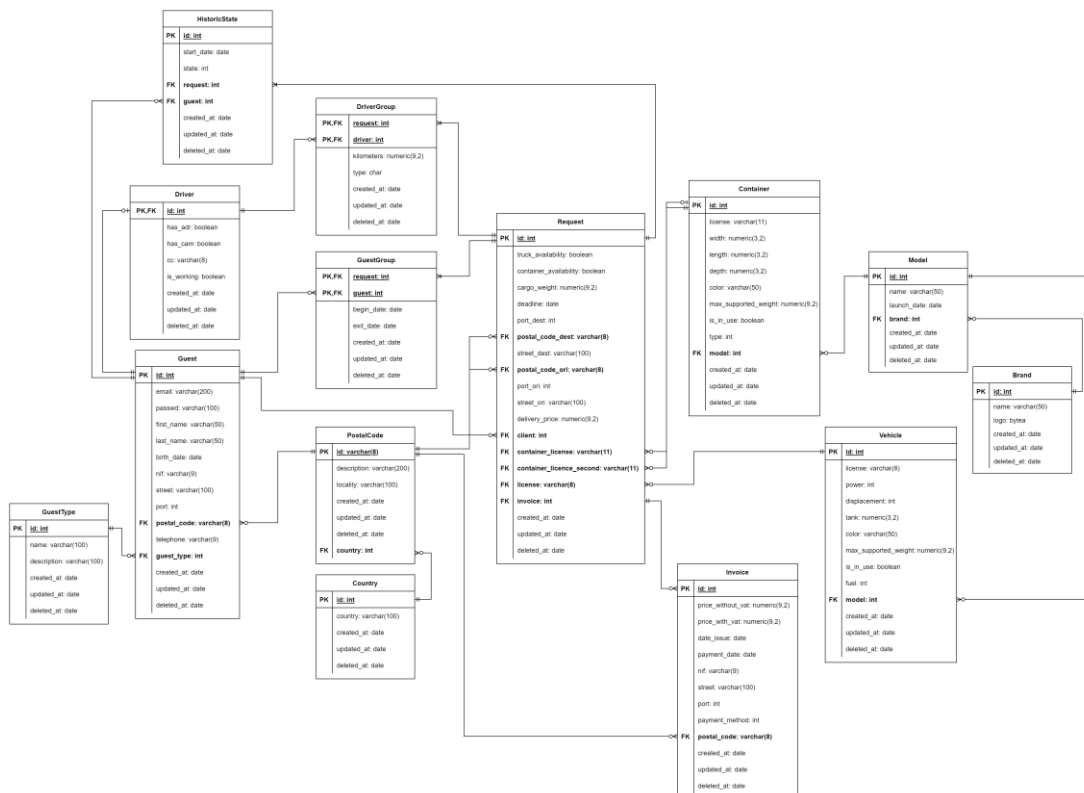

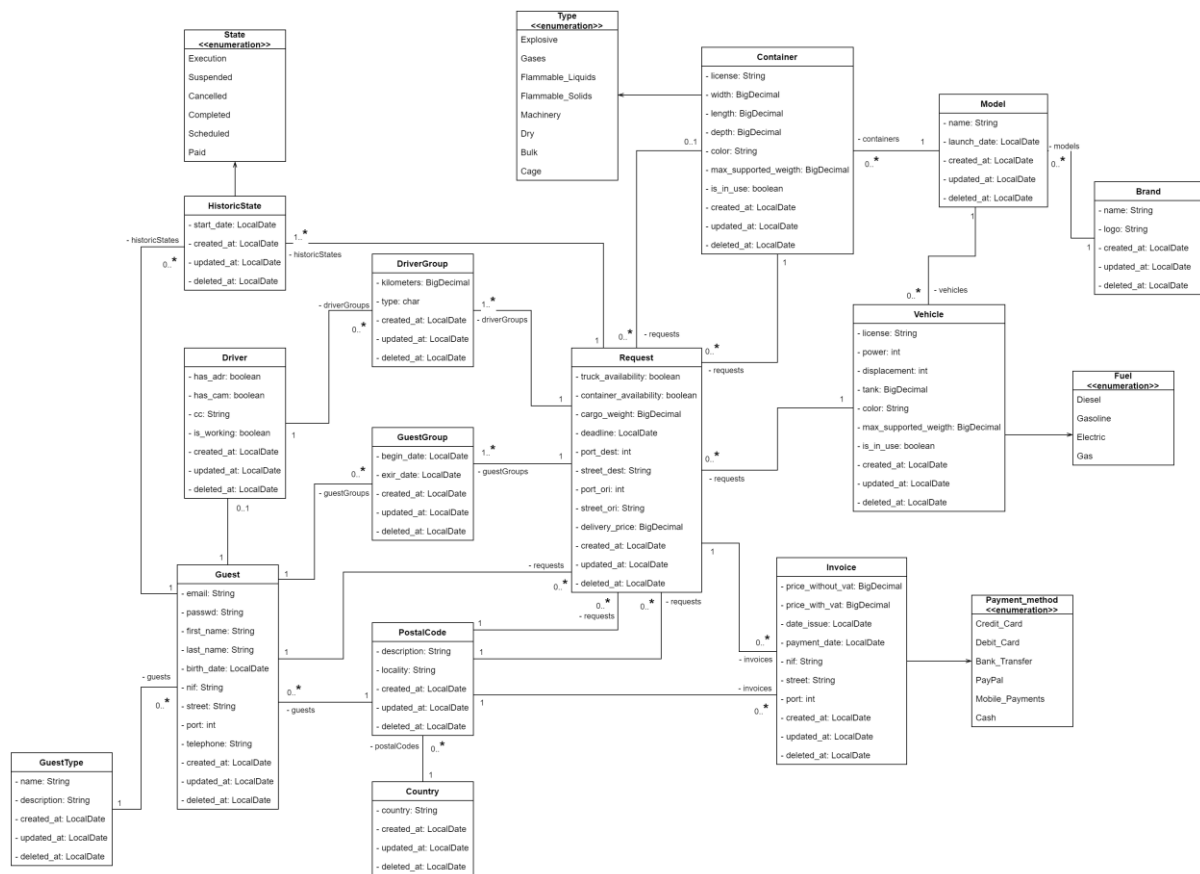

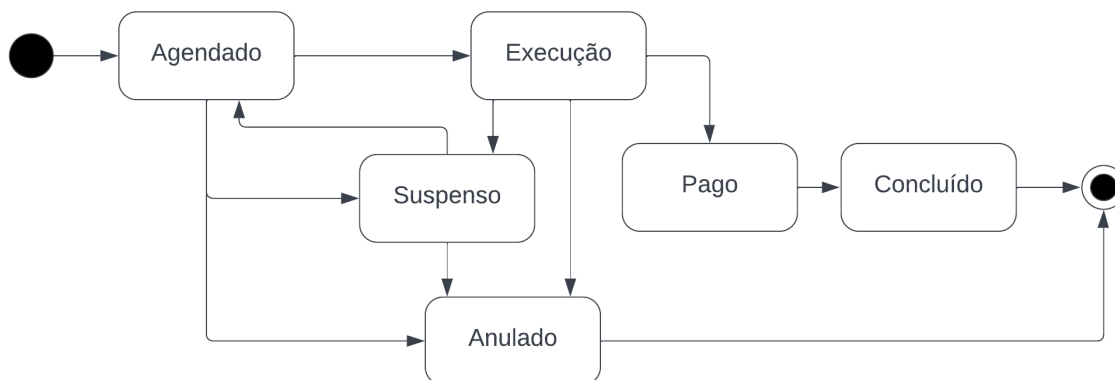

FIGURA 8 - MODELO RELACIONAL

4.4- Diagrama de transição de estados do Pedido

**FIGURA 11 - DIAGRAMA DE TRANSIÇÃO DE ESTADOS**

## 5. Implementação da BD

### 5.1- Criação das tabelas

```
CREATE TABLE Country(  
    id SERIAL NOT NULL,  
    country VARCHAR(100) NOT NULL UNIQUE,  
    created_at DATE DEFAULT now(),  
    updated_at DATE DEFAULT NULL,  
    deleted_at DATE DEFAULT NULL,  
    PRIMARY KEY (id)  
);  
  
CREATE TABLE PostalCode(  
    id VARCHAR(8) NOT NULL,  
    description VARCHAR(200) DEFAULT NULL,  
    locality VARCHAR(100) NOT NULL,  
    country INT NOT NULL,  
    created_at DATE DEFAULT now(),  
    updated_at DATE DEFAULT NULL,  
    deleted_at DATE DEFAULT NULL,  
    PRIMARY KEY (id),  
    CONSTRAINT country_fk1  
        FOREIGN KEY (country)  
            REFERENCES Country (id)  
);  
  
CREATE TABLE GuestType(  
    id SERIAL NOT NULL,  
    name VARCHAR(100) NOT NULL UNIQUE,  
    description VARCHAR(100) DEFAULT NULL,  
    created_at DATE DEFAULT now(),  
    updated_at DATE DEFAULT NULL,  
    deleted_at DATE DEFAULT NULL,  
    PRIMARY KEY (id)  
);
```

Pode ser visualizada a criação das restantes tabelas no [anexo 1](#)

## 5.2- Gestão dos dados na base de dados

### 5.2.1 - Inserção de dados

```
insert into Country (country) values ('Russia');
insert into Country (country) values ('Philippines');
insert into Country (country) values ('Japan');
insert into Country (country) values ('Morocco');
insert into Country (country) values ('China');
insert into Country (country) values ('Indonesia');
insert into Country (country) values ('Argentina');
insert into Country (country) values ('Madagascar');
insert into Country (country) values ('France');
insert into Country (country) values ('Greece');
insert into Country (country) values ('Peru');
insert into Country (country) values ('United States');
insert into Country (country) values ('Poland');
insert into Country (country) values ('Palestinian Territory');
insert into Country (country) values ('South Korea');
insert into Country (country) values ('Albania');
insert into Country (country) values ('Portugal');
insert into Country (country) values ('Sweden');
insert into Country (country) values ('Ethiopia');
insert into Country (country) values ('Finland');
insert into Country (country) values ('Serbia');
insert into Country (country) values ('Belarus');
insert into Country (country) values ('Canada');
insert into Country (country) values ('Lithuania');
insert into Country (country) values ('Vietnam');
insert into Country (country) values ('Malaysia');
insert into Country (country) values ('Chile');
insert into Country (country) values ('Colombia');
insert into Country (country) values ('Bulgaria');
insert into Country (country) values ('Croatia');
insert into Country (country) values ('Brazil');
insert into Country (country) values ('Venezuela');
insert into Country (country) values ('Tanzania');
insert into Country (country) values ('North Korea');
insert into Country (country) values ('Moldova');
insert into Country (country) values ('Czech Republic');
```

Podem ser visualizadas as restantes inserções de dados no [anexo 2](#)

### 5.2.2 – Views

**View com o objetivo de apresentar toda a informação relevante dos pedidos:**

```
create view requestInfo
as select
    r.id as request_id,
    r.truck_availability,
    r.container_availability,
    r.cargo_weight,
    r.deadline,
    r.delivery_price,
    r.port_dest,
    r.street_dest,
    postal_dest.id as postal_code_dest,
    postal_dest.locality as locality_dest,
    country_dest.country as country_dest,
    r.port_ori,
    r.street_ori,
    postal_ori.id as postal_code_ori,
    postal_ori.locality as locality_ori,
    countryOri.country as country_ori,
    container_first.license as container_first,
    container_second.license as container_second,
    truck.license as truck_license,
    guest.first_name as client,
    inv.price_with_vat,
    inv.date_issue,
    inv.payment_date
from request r
inner join PostalCode postal_dest
    on r.postal_code_dest = postal_dest.id
inner join country as country_dest
    on country_dest.id = postal_dest.country
inner join PostalCode postal_ori
    on r.postal_code_ori = postal_ori.id
inner join country as countryOri
    on countryOri.id = postal_ori.country
inner join container container_first
    on container_first.license = r.container_license
left join container container_second
    on container_second.license = r.container_license_second
inner join vehicle truck
    on truck.license = r.license
inner join invoice inv
    on inv.id = r.invoice
inner join guest guest
    on guest.id = r.client
inner join guestType guest_type
```

```
on guest_type.id = guest.guest_type  
where guest_type.name = 'Cliente'  
;
```

**View com o objetivo de apresentar todos os motoristas de todos os pedidos:**

```
create view requestDriver  
as select  
    ri.request_id,  
    guest.first_name || ' ' || guest.last_name as driver_full_name,  
    d.has_adr as adr,  
    d.has_cam as cam,  
    d.cc as cc,  
    d.is_working,  
    case  
        when dg.type = 'p' then 'Principal'  
        when dg.type = 'c' then 'Co-Piloto'  
    end as type,  
    dg.kilometers  
from requestInfo ri  
inner join DriverGroup dg  
    on ri.request_id = dg.request  
inner join driver d  
    on d.id = dg.driver  
inner join guest guest  
    on guest.id = d.id  
;
```

## 5.2.3 - Triggers

**Trigger com o objetivo de atribuir um tipo aos motoristas de um pedido:**

```
create or replace function log_change_driver_type()
returns trigger
language plpgsql
as
$$
declare
    _drivers int;
begin

    select count(*)
    from drivergroup
    where request = new.request
    into _drivers;

    if _drivers > 1 then
        update drivergroup
        set type = 'c'
        where request = new.request and driver = new.driver;
    else
        update drivergroup
        set type = 'p'
        where request = new.request and driver = new.driver;
    end if;

    return new;
end;
$$;

create or replace trigger alterar_tipo_driver
after insert
on drivergroup
for each ROW
execute procedure log_change_driver_type();
```

#### 5.2.4 - Indexes

**Index para identificar pedido mais rapidamente:**

```
create unique index indexRequest  
on request (id);
```

**Index para identificar contentor mais rapidamente:**

```
create unique index indexContainer  
on container (license);
```

**Index para identificar veiculo mais rapidamente:**

```
create unique index indexVehicle  
on Vehicle (license);
```

### 5.2.5 Stored Procedures

#### **Stored Procedure para adicionar um Cliente:**

Create OR replace PROCEDURE addClient (

```
g_email VARCHAR,  
g_passwd VARCHAR,  
g_first_name VARCHAR,  
g_last_name VARCHAR,  
g_birth_date DATE,  
g_nif VARCHAR,  
g_street VARCHAR,  
g_port INT,  
g_postal_code VARCHAR,  
g_telephone VARCHAR
```

)

LANGUAGE plpgsql

AS \$\$

BEGIN

```
INSERT INTO Guest (email, passwd, first_name, last_name, birth_date, nif, street, port,  
postal_code, telephone, guest_type) VALUES
```

```
(g_email, g_passwd, g_first_name, g_last_name, g_birth_date, g_nif, g_street, g_port,  
g_postal_code, g_telephone, 1);
```

END \$\$;

#### **Call para chamar store procedure:**

```
call addClient ('maiaMaria@gmail.com', 'noonewillfindout12?!', 'Maia', 'Maria', '1985-02-07',  
'837502849', 'Rua Cesario Verde', 220, '3420-177', '917503249');
```

### Stored Procedure para adicionar um Motorista:

```
CREATE OR replace PROCEDURE createDriver (  
  g_email VARCHAR,  
  g_passwd VARCHAR,  
  g_first_name VARCHAR,  
  g_last_name VARCHAR,  
  g_birth_date DATE,  
  g_nif VARCHAR,  
  g_street VARCHAR,  
  g_port INT,  
  g_postal_code VARCHAR,  
  g_telephone VARCHAR,  
  d_has_adr BOOLEAN,  
  d_has_cam BOOLEAN,  
  d_cc VARCHAR  
)  
LANGUAGE plpgsql  
AS $$  
DECLARE  
  _id_guest int;  
BEGIN  
  
  INSERT INTO Guest (email, passwd, first_name, last_name, birth_date, nif, street, port,  
postal_code, telephone, guest_type) VALUES  
  (g_email, g_passwd, g_first_name, g_last_name, g_birth_date, g_nif, g_street, g_port,  
g_postal_code, g_telephone, 4);  
  
  SELECT  
    id  
  FROM guest where email = g_email  
  into _id_guest;  
  
  insert into Driver (id, has_adr, has_cam, cc) values  
  (_id_guest, d_has_adr, d_has_cam, d_cc);  
  
END $$;
```

## 6. Conclusão

Este relatório redigido no âmbito da Unidade Curricular de Projeto I, demonstra o trabalho realizado pelo nosso grupo, bem como o nosso percurso de aprendizagem, conhecimento adquirido nas aulas e de dúvidas esclarecidas pelos professores. Assim sendo, foram realizadas ao longo do trabalho várias atualizações a modelos, casos de uso e diagramas já entregues.

Durante todo o trabalho prático surgiram dúvidas e obstáculos, que pensamos que foram ultrapassados e nos fizeram perceber melhor certos modelos, diagramas ou códigos utilizados.

Para que fosse possível trabalhar com a base de dados Postgresql, foi utilizada a ferramenta Docker de forma a atingir o seu isolamento. Além disso, utilizou-se a WSL do Windows para obter um ambiente Linux que permitisse a utilização da ferramenta psql para a execução dos scripts formulados no desenvolvimento do trabalho prático.

Conseguimos, assim, complementar a matéria alvo de aprendizagem nas aulas das Unidades Curriculares de Engenharia de Software I e Base de Dados, além de desenvolver a nossa capacidade de trabalhar em equipa, para obter o melhor resultado possível.
